

Summary Assignment: Simple Loop Patterns

Objective

Write Python programs to generate different star (*) patterns using nested **for** loops. This assignment will help you understand how loops work together to create structured patterns.

Tasks

Pattern 1

```
*
**
***
****
*****
```

Pattern 2

```
*****
****
***
**
*
```

Concepts Covered

- for Loop
- Nested for Loop
- range() Function
- print() Function
- end="" Parameter
- Pattern Printing Logic

Instructions

- Use nested for loops to generate both patterns.
- Do not manually type the stars.
- Each pattern should be displayed exactly as shown.
- Use print() to move to the next line after completing each row.
- Write clean, properly indented Python code.

Learning Outcomes

- Use nested loops effectively.
- Understand row and column iteration.
- Generate different text-based patterns.
- Strengthen problem-solving skills using loops.
- Build a foundation for more advanced pattern programming.
